

CEMUS

Technology, Power and the Future of Humanity 7,5 hp

Learning Outcomes

On completion of the course, the student should be able to:

- analyse different views on the role of technology in society, the relationship between technology and sustainable development, and how humans as individual beings influence and are influenced by different technologies.
- apply conceptual, analytical and ethical tools to understand the role of technology in individual as well as collective meaning making processes.
- critically review different technologies, the use and development of technology and its consequences from a power perspective.
